

ENTER, WANDERER. YOUR LEGEND AWAITS.

Heroes of Legend

Steel, scars, and the choices that make a hero.

GREAT LIBRARY / TYPST TOOL TRIAL

When the dice speak

Roll only for uncertainty with consequences. Correct fictional action may reveal a clue without a roll. The DA asks for Brawn, Fortitude, Agility, Guile, Knowledge or Reason; the player takes an action which may call for that roll. Force is an action, not another attribute or a separate skill-roll category.
Roll 3d6 plus one attribute. Weak is 8 or below: progress, not automatic success. Standard is 9–14. Strong is 15 or above. Three natural retained sixes give Strong plus a benefit; three retained ones give Weak plus a complication. Boons and Banes cancel. Use at most three net extra dice, retaining the best or worst three. Difficulty comes through Banes, never another target number on the same roll. A cumulative task's progress target is a different thing: 1/2/3 progress per Weak/Standard/Strong result.

THREE OUTCOMES

WEAK · 8 OR BELOW
Progress, not automatic success.

STANDARD · 9–14

STRONG · 15 OR ABOVE

A turn at the table

At combat start, one unmodified 3d6: 12+ gives players the first turn, otherwise the opposing side starts. Alternate sides; each side chooses its next character. The same side starts every round. Each character has Main, Maneuver, Reaction and movement. Main converts to Maneuver, Maneuver to movement; never upward.
Player attacks use one attacker roll, even against a player. NPC attacks use the player's defense roll. Strong defense receives Weak attack effects, Standard receives Standard, Weak receives Strong. The defense itself spends no Reaction. Players roll their controlled creatures' printed attack and defense attributes. NPC-versus-NPC without a player controller still needs a DA procedure.
Damage is fixed by the card. Apply the highest resistance of each matching type, cap 3; do not sum matching armor. Minimum 1 damage applies to the whole damaging event, not each component. Physical is one type. Different resistances coexist. Conditions and displacement may matter more than a larger damage number.

Make the world move

Force

UNIVERSAL • NO DP COST

You set your shoulder, plant your feet and make the stubborn thing give ground.

Action: Main Action · Attribute: Brawn
Target / range / shape: An adjacent obstacle, grapple, or creature
Choose the intended result before rolling: reduce an obstacle's remaining strength, reduce your Grappled rating, or push a creature. DA establishes any obstacle target. Grappled 3 leaves no Main Action to spend.
- Weak: 1 progress, grapple reduction, or square of push.
- Standard: 2 progress, grapple reduction, or squares of push.
- Strong: 3 progress, grapple reduction, or squares of push.
Stability: apply it only to the push option, not obstacle progress or Grappled reduction.
Duration: Instant
Equipment / acquisition: None.

Gust Hammer

TIER 1 • LEVEL 1 • 2 DP • STORM 1 • MAGIC / ATTACK

You thrust your palm forward. A compressed rush of air strikes your enemy squarely and drives them backward.

Action: Main Action · Attribute: Reason
Target / range / shape: One visible creature within 4 squares
Proposed NPC defense attribute: Fortitude.
- Weak: 2 physical damage; push 1.
- Standard: 2 physical damage; push 2.
- Strong: 4 physical damage; push 3.
Duration: Instant
Equipment / acquisition: None.

Goblin Scrapper (CV 7)

A small, wiry goblin salvager with keen eyes, patched work clothes and pockets full of useful scraps. Quick hands and knowledge of the ruins compensate for modest reach.

Attributes: Brawn +0; Fortitude +0; Agility +2; Guile +1; Knowledge +0; Reason +0
HP: 8 · Speed: 7 · Size: 1 (medium) · Armor DR: 0
Evasion: 1 Bane · Threat: None · Stability: 0
Weaknesses: None
Resistances: None
Immunities: None

Actions

Weak / Standard / Strong player defense

Main action	Defense	Damage
Basic Melee	Agility	4 / 2 / 1
Scrap knife	Agility	5 / 3 / 2

Roll Away — Move up to 2 squares in a straight line without provoking opportunity attacks. Normal terrain costs and occupied-square restrictions apply.
Defend — +1 Bane.

Opportunity Attack — Basic Melee.

A quick-reference excerpt; the source creature contains the full timing, tactics, loot, and encounter details.

Rules in motion

Roll only for uncertainty with consequences. Correct fictional action may reveal a clue without a roll. The DA asks for Brawn, Fortitude, Agility, Guile, Knowledge or Reason; the player takes an action which may call for that roll. Force is an action, not another attribute or a separate skill-roll category.

Roll 3d6 plus one attribute. Weak is 8 or below: progress, not automatic success. Standard is 9–14. Strong is 15 or above. Three natural retained sixes give Strong plus a benefit; three retained ones give Weak plus a complication.

Boons and Banes cancel. Use at most three net extra dice, retaining the best or worst three. Difficulty comes through Banes, never another target number on the same roll. A cumulative task's progress target is a different thing: 1/2/3 progress per Weak/Standard/Strong result.

Turns and attacks

At combat start, one unmodified 3d6: 12+ gives players the first turn, otherwise the opposing side starts. Alternate sides; each side chooses its next character. The same side starts every round. Each character has Main, Maneuver, Reaction and movement. Main converts to Maneuver, Maneuver to movement; never upward.

Player attacks use one attacker roll, even against a player. NPC attacks use the player's defense roll. Strong defense receives Weak attack effects, Standard receives Standard, Weak receives Strong. The defense itself spends no Reaction. Players roll their controlled creatures' printed attack and defense attributes. NPC-versus-NPC without a player controller still needs a DA procedure.

Damage is fixed by the card. Apply the highest resistance of each matching type, cap 3; do not sum matching armor. Minimum 1 damage applies to the whole damaging event, not each component. Physical is one type. Different resistances coexist. Conditions and displacement may matter more than a larger damage number.

Movement

Normal squares cost 1, difficult 2. Diagonal movement costs 1. Standing costs 2 movement. Cannot cross an occupied square unless its occupant is prone; then cost 2 and never end there. Forced movement consumes the entered terrain's cost; any positive remaining budget can enter the final square and stop even if that cost exceeds the budget.

Forced collisions gather movable occupants into one moving group. All take the collision damage; the remaining movement continues together. A hard obstruction stops the group and adds 1 to remaining-budget collision damage. The original mover bounces one square opposite afterward if possible. Detailed group footprint and congested geometry remain open; no new card resolves them by fiat.

All actors have Stability: default 0, explicit grants only, maximum 3, highest source. It consumes forced movement once per newly struck creature, including through a collision chain; no protection against Prone or conditions.

Conditions

Resolve a temporary numbered condition at turn end, then reduce by 1. Burning and Freezing deal their rating in matching elemental damage; Bleeding bypasses resistance. Poisoned applies its rating in Banes, not damage. Frightened supplies Banes while the stated source is perceptible. Slowed reduces Speed.

The story continues

Dazed 1/2/3 leaves two/one/no categories among Main, Maneuver and Reaction; choose at turn start. Movement remains. Paralyzed stops actions and movement at any positive rating; its number is duration. Blinded and Deafened numbers are duration, not severity. An asterisk prevents automatic decay; a persistent binary sense loss needs only rating 1*. Removal follows the source.

Grappled prevents movement and reduces action choices like Dazed; it is maintained, not decaying. The grappler suffers their own contribution too. Force can reduce Grappled while Main is retained; rating 3 needs help. Attacks gain Boons equal to the actual target's Grappled rating. Greater restriction applies when combined with Dazed, not their sum. Prone is binary. Hidden is universal, not observer-by-observer.

A mixed permanent/temporary bookkeeping proposal is recorded in the full condition reference. Do not let a new temporary effect become permanent merely because another is starred.

Summons, exploration and recovery

Summons require commands; see the summoning reference. Without a command they do nothing, including following, lookout and alerts. Old orders grant no continued activity; existing conditions and durations still resolve. No free independent turns, inherent Reactions or summon chains. No count cap. Beyond 6 squares from the controller they disappear, including forced movement of either participant.

Ordinary travel has no routine roll and no exhaustion track. Group checks occur outside combat only: each participant adds 1/2/3 to a declared target. State binary or cumulative before rolling. No group crafting, recipe derivation or wound treatment. After a safe breath, restore full HP. Grit expenditure and wounds persist. Player characters enter Dying at 0; creatures normally die there. Attacks are lethal unless an explicit ability permits a different outcome; grapple/restraint can capture.
